The National Network is working to identify and develop tools to enable employers to more deeply understand and operationalize competency-based hiring practices – the most effective way to source, hire and advance talent in today’s workplaces.

To assist employers in this new approach, the National Network commissioned Burning Glass to develop 52 occupational profiles of the most in-demand jobs from across 17 of the National Network’s member industry associations. The resulting profile references specific data points that employers can use to build competency-based job descriptions, helping hiring managers communicate more effectively to job seekers, educational institutions, and training providers about the competencies they need to fill vacant positions.

Read the Executive Summary.
Burning Glass Technologies

Occupation Profiles for Competency-Based Job Descriptions for National Network of Business and Industry Associations
Opportunities in Key Network Occupations:
A Competency-Based Analysis

This report supports the National Network of Business and Industry Associations work to develop a competency-based model of recruiting talent. This work supports recruitment and training of workers through identification of key skills and certifications demanded nationally.

Purpose of this Analysis:
This analysis will provide an overview of occupations across the National Network to support development of model job descriptions. Through this document, employers and associations will be able to:

• Understand the demand for specific roles
• Identify key competencies required based on broad employer demand
• Identify credential requirements that make jobs more difficult to fill
• Understand locations where roles are more difficult to fill, indicating a shortage of talented workers
• Develop model job descriptions for positions based on competencies required with an understanding of the impact specific skills will have on recruitment

Distinguishing Features:
Burning Glass has used its dataset of online job postings to deliver occupation analyses at a far more detailed and granular level than possible with other sources:

• Job postings data allow us to identify distinct roles based on the particular skills they require, not just broad occupational categories.
• Skill and credential analyses are based specifically on what employers demand in each labor market.
Report Overview

This document will provide a framework for building model job descriptions across a range of occupations. Through an emphasis on skill demand, this document will provide detail to enable employers to shift the focus of hiring from education and experience credentials to skills and competencies as the basis for recruitment.

The report is organized into two sections:

**Occupation Profiles**

- This tool provides a profile for each of the targeted occupations. Within each profile is overall demand, skill and certification requirements, difficult to fill skills, and education and experience requirements.
- This section also provides example job postings that represent best practices in incorporating competency-based requirements.

**Maps**

- This section provides geographic information for each of the occupations, through a series of maps presenting views on demand, concentration, and difficulty to fill roles across the country. These maps are available at [https://burning-glass.shinyapps.io/NationalNetwork/](https://burning-glass.shinyapps.io/NationalNetwork/)
Data Definitions

**National Postings** reflect the number of jobs posted on the internet in 2015 across all levels of experience and education.

**Bachelor’s Attainment (% B.A.+)** indicates the percentage of Java developer postings that require at least a Bachelor’s degree of any kind or higher from August 2014 – July 2015.

**% Entry Level** is the percentage of Java developer job postings that request 0 to 2 years’ experience in a similar field of work from August 2014 – July 2015.

**Education Distribution** is the distribution of education requirements across demand for a High School diploma (HS), Associate’s degree (AA), Bachelor’s degree (BA) or higher (Graduate). **Note:** occupations that typically ask for no higher than a high school diploma also indicate the proportion of jobs that do not specify education requirements.

**Experience Distribution** is the distribution of experience requirements, from less than 2 years through more than 8 years.

**Industry Sector** is the two digit industry classification based on the North American Industry Classification System (NAICS).

**Top Certificates** provides a list of the most in-demand certificates and certifications in job postings.

**Posting Duration** indicates how long on average job postings stay open and how hard it is for employers to fill these jobs over the last four quarters (October 2014 – September 2015).

**Location Quotient** calculates the ratio of postings to employment in a given target market compared to the national ratio as a benchmark to reflect a concentration of job posting demand.

**Employability Skills** are common skills that cross occupations. These are listed in order of demand for the individual occupation.
Skill Clusters

Orange bubbles represent key skill clusters in demand. Skill Clusters are groups of similar skills, such as:
- Computer skills
- Welding skills

Individual Skills will be listed next to the skill clusters, providing a glimpse of the most common specific skills demanded by employers.

Convex up triangle indicates bolded skills, which represent those that make a job more difficult to fill. Employers can use this information to set expectations for finding a candidate, and to understand the implications of including skill demand in a posting.

Convex down triangle indicates italicized skills, which indicate those that are defining to the roles, appearing more frequently than in similar positions.

Employability Skills:
This section will provide the most commonly demanded baseline, or employability skills, for the occupation.

Occupation Profile

Occupation Name: This area will provide a description of the broad occupation. The box to the lower right will provide total postings, and broad metrics on the percent of postings calling for a Bachelor's degree, and for less than 2-years’ experience.

Common Job Titles:
This area will provide common titles used by employers to fill the occupation.

Assembler / Fabricator: Sample Posting

Role Summary/Purpose
Actively participate in a teaming environment that uses lean and 5S practices to improve products and processes.

Essential Responsibilities
- Ability to follow written work instructions, processes and procedures
- Performs visual & basic measurement inspection of parts subsequent to assembly steps
- Ability to obtain all required certifications of department
- Cut, strip, and crimp wire as required
- Operate test equipment as required
- Ability to work with hazardous materials
- Ability to use a wide variety of hand and/or power tools as required
- Ability to do weight measuring as required
- Ability to read and interpret dimensional measurements as required (calipers, and scales)
- Performs functional tests using a variety of equipment to verify accuracy and functionality (i.e. electrical, helium, and leak tests as required)
- Ability to cross-train as required
- Ability to lift up to 25 pounds

Qualifications/Requirements
- Actively participate in a teaming environment that uses lean and 5S practices to improve products and processes
- High School diploma or GED
- Basic computer skills
- Basic math skills
- Basic ERP skills
- Basic written and verbal communications skills

Additional Eligibility Qualifications
EMPLOYER will only employ those who are legally authorized to work in the United States for this opening. Any offer of employment is conditioned upon the successful completion of a background investigation and drug screen.

Desired Characteristics
- Ability to read and interpret blueprints
- Soldering and electronics manufacturing experience
- Assembly experience
- Braze experience
- Dimensional and electrical training

Role Summary:
The Business Intelligence Analyst role is responsible for design, development, documentation and support of new and existing business intelligence, data integration, and analytic systems.

Essential Duties & Responsibilities include:

- **Business Intelligence.** Designing, documenting, developing, testing and deploying various business intelligence and analytic applications in support of the business and act as subject matter expert for Business Intelligence.
- **Technical Support.** Supporting, troubleshooting and maintaining existing business applications (Cognos BI, SQL Server, SharePoint, SSIS, ETL).
- **Data Integration.** Participating with other teams in integration efforts as new systems are deployed or legacy systems are retrofitted into Buckeye business practices. Design, document, develop and test data integration and ETL processes.
- **Training.** Developing and providing training for new and existing applications.
- And other duties as assigned.

Position Requirements:

- Bachelors or Masters Degree in an Information Technology or related discipline
- 7+ years related experience in appropriate specialty areas including but not limited to: Analysis and Design, Business Intelligence principals, Database Analysis, Application Support, Application Development, and related Data Initiatives
- SQL Server 2008 or later experience is required.
- Cognos experience is strongly desired in any of the following areas: Cognos 10 BI, PowerPlay, Report Studio, Metric Studio, Analysis Studio, Workspace Advanced.
- SSIS experience preferred
- Up to 25% domestic travel

Certificates & Licenses:

- Microsoft Certification or Cognos certifications desired
- Other Business Analysis, Intelligence certifications desired

Other Skills, Attributes and Abilities:

This position requires exceptional analytical and technical skills. One must be able to pay particular attention to detail and accuracy, and be able to recognize symptoms, analyze business scenarios, and take appropriate action to define and implement successful business strategies.

This position requires excellent communication and interpersonal skills. One must be able to assist users in a pleasant, non-technical manner for problem resolution. One must also be able to engage business users to understand requirements, recommend solutions, and provide technical guidance.

This position requires strong sense of ownership and ability to drive initiatives through to completion in the face of challenges.

Description:

COMPANY has an exciting opportunity for an experienced cyber security professional to become part of our Cyber Security team supporting a critical Navy Programs at our Washington Navy Yard location.

JOB SUMMARY.

The person filling this role will be responsible for maintaining computer and information security accreditations to include incident, damage and threat assessment activities.

PRIMARY RESPONSIBILITIES

- Investigating computer and information security incidents to determine extent of compromise to information and automated information systems, network assessments, researching and maintaining proficiency in tools, techniques, countermeasures, and trends in computer network vulnerabilities, data hiding and network security and encryption.

- Designing, developing or recommending integrated system solutions ensuring proprietary/confidential data and systems are protected, participating with our customer to ensure that the customer systems are compliant with all DoD security policies and regulations.

- Configuring and validating secure systems, and should be familiar with testing security products/systems to detect computer and information security weakness. The successful candidate will have excellent written and verbal communication skills and enjoy working in a collaborative environment with internal team members across multiple areas as well as client team members.

Qualifications:

- Bachelor’s degree and 8 years of prior relevant experience or Masters with 6 years of prior relevant experience. May possess a Doctorate in technical domain.

- Active TS/SCI clearance
Data Mining Analyst

**Occupation Profile**

**Data Mining Analyst**: Develops computer programs to analyze large customer information databases for companies and organizations. Analyzes data to identify patterns and provide information relevant to a particular business, industry or field; analysis may be used for marketing, or to detect fraud in financial transactions, or for research. Develops computer programs to protect confidential customer information.

Data Mining Analyst: Sample Posting

SPECIFIC RESPONSIBILITIES:

- Ability to pull data for internal and external customers using SQL and similar tools.
- Perform data analysis for businesses and design and develop critical ad hoc reports.
- Develop report prototypes to shorten the development cycle.
- Ability to make create and maintain ETL workflows.
- Perform preliminary data analysis for businesses cases and study metrics leading to product improvements.
- Gather reporting requirements for change requests and ad hoc reports.
- Work directly with end-users to identify, investigate, and resolve technical issues.
- Assist in development and implementation of measurement systems.
- Utilize specified software to analyze and interpret research data, as appropriate to the individual position.
- Perform structured quality assurance testing including the development of a test plan and scripts.
- Ensure appropriate project documentation is produced.

QUALIFICATIONS

REQUIRED QUALIFICATIONS:

- 1 year experience with SQL and accessing database structures.
- 1 year experience with No/SQL solutions (Mongo or Hadoop).
- Expertise with MS Office (MS Access, MS Word, MS Excel).
- Demonstrated experience developing and implementing support procedures.
- Preferred: Strong understanding of Databases, websites and SQL/NoSQL.

EDUCATION REQUIRED:

- Bachelors degree or 2 years work experience.
Database Administrator

Occupation Profile

**Database Administrator**: Uses software to store and organize data, such as an organization’s records or financial information. Ensures that users can easily access the information they need and that data are protected from unauthorized access.

**Common job titles include:**
- Database Administrator
- ORACLE Database Administrator
- SQL Database Administrator
- SQL Developer
- ETL Developer

EMPLOYER DESCRIPTION

At EMPLOYER, we're building a great company that is laser focused on three core values:

- Ensure Customer Success: Obsessive and unwavering commitment to making customers successful.
- Focus On Results: Relentless focus on delivering results through innovation and a bias for action.
- Strive For Excellence: Commitment to a collaborative environment infused with professionalism, integrity, passion, and accountability. The Database Administrator will be a key team member in Engineering with extensive experience in multiple database environments and versions. This role will share responsibility with the operation team for ensuring uptime, security and performance of all database servers from production to test environments and contribute as mentor and database expert within the Development team.

Responsibilities

- Design, install, maintain, document and upgrade databases within Coupa cloud infrastructure
- Implement database changes as part of software and infrastructure releases
- Monitor and analyze databases to achieve optimum performance and high availability
- Conduct server and query performance analysis and capacity planning, providing guidance for application performance tunings
- Automation of administrative tasks in accordance with operational best practices
- Complies with security policies and procedures, to ensure that the highest level of system and data confidentiality is maintained
- Identify and evaluate industry trends in database systems and technologies
- Train NOC and other operation support staff and act as L3 on-call support for database issues
- Mentor development team on database best practices
- Work in an agile environment where quick iterations and good feedback are a way of life
- A good team player, works, and communicates well with others

Skills & Requirements

- BA/BS in Computer Science or Information Technology, or equivalent experience
- 8-10 years of database administration experience
- Expertise with MySQL 5.x administration, monitoring and tuning
- Experience with all aspects of data modeling and storage
- Solid understanding of software development best practices
- Familiarity with agile methodologies

Nice-to-Haves

- Knowledge of Ruby and Rails
- Experience with ETL tools and processes
- Experience with Redis, Memcache, Hadoop, other Big Data and NoSQL technologies
- Contribution to open source project
General Manager

**Occupation Profile**

**General Manager:** Manages all aspects of a business. May be responsible for managing a small business, or managing one division or department of a larger business. Oversees administration, finance, communication and marketing as well as operations for a company. Reports to business owners, executive management or a board of directors.

**Common job titles include:**
- General Manager
- Branch General Manager
- Bilingual General Manager
- Automotive General Manager

General Manager: Sample Posting

The General Manager will lead the on-site management team and will work to produce competitive returns for the investment client while ensuring the highest level of customer service to Park Avenue West’s residents and guests.

Essential Functions:

To perform this job successfully, an individual must be able to perform each essential duty satisfactorily with or without reasonable accommodations.

- Represent company in a positive and professional manner at all times.
- Act as the company's primary coordinator to assure that the company’s efforts fully meet and exceed property management obligations.
- Manage all property operations in compliance with all local, state, and federal laws (Fair Housing, Landlord Tenant Laws, OSHA, etc).
- Under the direction of the Portfolio Manager, assist in the development of operating income/expense budgets and capital budgets that reflect the owner’s objectives for operating the property, cash flow requirements and leasing strategy.
- Analyze and report monthly financial statements including operating variances from budget, cash management and strategies for collection of receivables in a timely manner.
- Accurately record time worked, adhere to time keeping guidelines including approving site staff time records on a daily basis.
- Administer leasing efforts including reviewing tenant billings, analyzing lease clauses, preparing vacancy reports, enforcing tenant compliance and performing landlord obligations.
- Identify leasing prospects and occasionally respond to routine leasing inquiries.
- Collect delinquent accounts according to legal guidelines and communicate with accounting department to ensure accuracy of rent roll and accounts receivable.
- Work with Portfolio Manager to identify, engage and supervise property vendors.
- Approve invoices for all goods/services required to maintain the property’s upkeep to company and owner standards and in accordance with property’s budget.
- Liaison with corporate departments to provide a team approach to the management of the property.
- Other duties as assigned by the Portfolio Manager.

Qualification Requirements:

- Bachelor’s Degree required.
- At least three years’ experience in a leadership role in the Multifamily industry.
- At least one year of experience managing in luxury or high-end sales and customer service.
- At least one year of budgeting and financial reporting experience.
- Excellent attention to detail and organizational skills.
- Strong mathematical skills and basic understanding of property budgets and financial accounting.
- Ability to speak, read and write in English.
- Ability to communicate effectively and in a timely manner; both verbally and in writing.
- Able to complete company training requirements for this position within pre-determined deadlines and attend other training sessions as required.
Heavy Equipment Mechanic: Maintains and repairs heavy equipment like construction vehicles and fire trucks.

Common job titles include:
- Heavy Equipment Mechanic
- Forklift Mechanic
- Equipment Mechanic
- Heavy Mobile Equipment Mechanic
- Crane Technician

Heavy Equipment Mechanic

General Description

Performs routine repairs/maintenance and inspection related activities for fleet operations and automotive shops. Work may require maintenance and repair of heavy equipment used in construction of highways/bridges. Work may require contact with other governmental agencies and private contractors. Employees at this level follow standard practices that do not require frequent supervision of details.

Duties

- Acts as an attendant at the service station.
- Adjusts brakes and replaces brake system parts to include anti-locking systems.
- Assists in preparing vehicles for sale.
- Assists in troubleshooting, testing and repair of electrical systems, electronic ignitions or fuel injection systems.
- Assists other district shops.
- Checks lighting and wiring mechanisms to ensure proper functioning of headlights, spotlights, tail lights and parking lights.
- Completes repair order paperwork.
- Orders, picks up and delivers parts, materials, tools, and operates equipment and vehicles to include heavy equipment.
- Performs annual state safety inspections on vehicles to include DOT required inspections.
- Performs preventive maintenance, inspections and repairs on motor vehicles/equipment; as required moves items related to these activities.
- Prepares vehicles for use by checking for required safety features such as first aid kits, fire extinguishers and mobile radios.
- Repairs vehicle air conditioning systems.
- Uses computerized diagnostic analyzer systems and performs routine diagnostic work on vehicles.

Competencies

- Communicate effectively
- Follow verbal and written instructions
- Follow applicable safety standards, practices and procedures
- Mechanical equipment operation and maintenance
- Mechanical systems
- Basic vehicle mechanics, maintenance and repair procedures
- Applicable industry safety standards, guidelines and specification codes
- The safe use, operation and maintenance of applicable equipment
- Troubleshooting, repairing and maintaining equipment of the trade
- The use of applicable hand and power tools, equipment and mechanical devices of the trade
- Mechanical repair procedures for diesel and gasoline engines
- Brake repairs to include anti-locking systems, air brakes and hydraulic brake systems
- Maintaining a safe working relationship

Industrial Engineer: Sample Posting

Perform industrial/manufacturing engineering activities related to all phases of the product life cycle to improve process flows, increase throughput, capacity and quality, reduce operation costs, and improve overall efficiency of products and plant operations.

RESPONSIBILITIES

- Develop, implement, standardize and own motion/time studies, methodologies, and documentation
- Develop shop floor metrics to clearly depict where bottlenecks, wastes, cost, inefficiencies and opportunities exist, and make recommendations for improvement
- Improve throughput through the reduction of changeover time, increase of product yields, optimization of machine cycle time and identification and eliminate of unplanned machine down-time
- Design, review and revise manufacturing/process documentation for new and existing products and processes
- Participate in risk analysis activities at various phases of product development, production and delivery
- Coordinate and implement the quality program throughout all departments within the company, from management to production.
- Promote and execute quality standards, inspection processes, test methodology, quality plans, documents and reports
- Collect, analyze and communicate critical performance metrics for understanding areas of financial opportunity and process redesign activity results, analyze root causes of difficult problems using statistical tools, and work with appropriate team member on corrective actions
- Train team members in new and existing manufacturing processes
- Evaluate and propose acquisition of new tools, equipment and processes to aid in production efficiency and safety.
- Assist in investigating all customer complaints and interface with supplier and customer quality representatives concerning problems with quality assurance and ensure that effective corrective action is implemented.
- Interact with suppliers and their quality management and engineering teams
- Determine root causes of failures using statistical methods and recommend changes in designs, tolerances, or processing methods.

REQUIREMENTS

- Education: BA or BS degree (manufacturing, industrial, mechanical or electrical engineering preferred)
- Minimum of 3 years’ experience in a manufacturing company
- Expert knowledge and demonstrated ability in Lean manufacturing in order to perform time and motion studies, developing and documenting standard work, planning and implementing continuous improvement initiatives, and preparing statistical analysis and project management.
- Working knowledge of advanced quality tools such as Failure Modes Effect Analysis (FMEA), GD&T, SPC, and Root Cause Analysis
- 2D & 3D CAD experience, ability to read and interpret drawings
- Experience with high mix/low volume manufacturing a plus
- Exposure to Six Sigma and other continuous improvement tools
Occupation Profile

**Industrial Mechanic:** Repairs and maintains complex machines used in production or manufacturing, such as conveyor belts; may use computerized diagnostic equipment.

Industrial Mechanic: Sample Posting

General Description:
To assure that manufacturing/process areas are kept in good mechanical repair and working order as well as in constant production mode at all time.

Specific Duties
- Order proper materials for job completion.
- Tag out and lockout procedures.
- Perform preventative and corrective maintenance on mechanical equipment.
- Complete required records for work performed.
- Perform planned maintenance inspections as required.
- Maintain equipment to ensure maximum reliability.
- Troubleshoot mechanical equipment failures and repair all process and plant equipment as necessary.
- Other duties as assigned.

Qualifications
- High School Diploma or GED.
- Complete tasks with minimal supervision.
- Basic mechanical aptitude.
- Ability to use hand and shop tools.
- Proven mechanical, hydraulic, and pneumatic skills.
- Ability to lift 50 pounds.
- Demonstrated maintenance and troubleshooting skills.
- Mechanical experience in either manufacturing or related areas.
- Demonstrated commitment to safety and quality required.
- Black Seal High Pressure Boiler's License, preferred.
Occupation Profile

Logistician / Logistics Analyst: Provides data analysis that can be used to improve a logistics process for a company or organization. Uses research and statistical analysis to solve operational logistics problems. Identifies ways to improve the transfer of materials, products or data within a company; identifies efficient and cost effective shipping, transportation and storage procedures.

The Logistics Coordinator provides overall direction and supervision throughout the Dedicated Fleet operation and provides operational assistance to the Project Manager wherever needed.

Essential Duties & Responsibilities:

- Maintains positive and encouraging working relations with all drivers
- Provides constant communications of service issues to appropriate personnel and departments, both internal (NFI) and external (Customer)
- Develops and provides analysis of dedicated routes and schedules
- Performs load planning, driver scheduling, and dispatch duties using Dedicated Fleet.
- Coordinates daily data entry into NFI’s proprietary order-management-system, TMW.
- Coordinates with home-office Invoicing team to ensure timely and accurate completion of weekly customer invoices
- Ensures accurate and timely completion of daily and weekly tasks
- Provides weekly KPI/performance data reports to both internal and external parties
- Assists Project Manager with implementing NFI’s Safety, Security and Labor policies
- Assists and provides coverage throughout departments during vacations, holidays and irregular work schedules
- Manages and maintains driver payroll
- Audits and approves driver expense reports
- Provides assistance to Project Manager wherever needed

Job Related & Physical Requirements:
- Travel on a moment notice for perhaps extended periods of time
- Ability and availability to work extended hours including nights and weekends as needed by the customer

Minimum Experience, Education, and Training Required:
- At least 2-3 years experience in logistics and/or transportation
- Computer applications experience including MS Office strongly desired
- Excellent customer service, problem solving and decision making skills desired

POSITION SUMMARY
Sets up and operates a variety of machine tools such as lathes, milling machines, shapers, planers, and precision grinders to make metal parts, mechanisms, tools or machines to exacting tolerances and dimensions. Interprets blueprints, sketches, and engineering specifications. Uses a variety of machinist’s hand tools and precision measuring instruments. Makes standard shop computations relating to dimensions of work, tooling, feeds, and speeds. Measures, marks, and scribes dimensions and reference points to lay out stock for machining. Fits and assembles precision parts into mechanical equipment. Some machines may be numerically controlled. May monitor and verify quality in accordance with statistical process or other control procedures.

PRIMARY RESPONSIBILITIES
• Observe and implement Lean Manufacturing methods in all job assignments
• Maintain spindle turning at maximum at all times
• Ensure parts and tools are loaded correctly and that quality is consistently maintained throughout the assignment
• Change and adjust cutters under supervision as instructed
• Learn and adhere to policies and procedures, particularly BQMS standards directly related to the work center
• Perform other duties as assigned

KNOWLEDGE & SKILLS
• Knowledge of general machining processes using a wide variety of machine tools
• Understanding of CNC type machines and the processes they use, such as set-ups, monitoring, change-outs, etc.
• Know how to maintain a clean and orderly work area
• Blueprint reading and basic math skills
• Good manual dexterity
• Ability to professionally communicate and work cooperatively with others
• Basic English language skills and ability to read, follow, and interpret work instructions
• Attention to detail
• Willingness to learn and, as required train others

EDUCATION
High School Diploma or equivalent;
Machinist 2 year Certificate preferred

JOB REQUIREMENTS

Marketing Research Skills:
- Demonstrated ability to develop research questions that will solicit the information needed to make business decisions.
- Expertise in information gathering: understands the available resources, conducts business research, leverages analytical tools, retrieves data, uses knowledge of the industry to fill in information gaps, and leverages the network of contacts in the utility industry.
- Strong analytical skills: able to synthesize and transform information into fact-based theories; interprets and draws conclusions based on seemingly unrelated pieces of information.
- Basic understanding of primary research options, methodologies, statistical analysis and when they are needed to complement secondary research.
- Basic knowledge of the complete marketing process (market research, product development/design, product distribution, pricing, promotion/advertising, brand management, sales management, etc.)

Consulting and Communication Skills:
- Strong consulting skills needed to build and manage effective working relationships across multiple business units and levels of an organization.
- Strong collaboration skills required for working on team-based or cross-functional projects.
- Excellent written and verbal communications skills.
- Must exhibit “Southern Style” behaviors and values: unquestionable trust, superior performance, and total commitment.

JOB RESPONSIBILITIES

- Manage small, medium and large-scale secondary research projects.
- Consult with business partners to help them make enhanced decisions based on industry and research knowledge.
- Proactively track and communicate implications of industry/market/competitor activities to business partners; explaining the impact these activities could have on Southern Company’s retail marketing efforts.
- Leverage the Marketing Research Department’s subscriptions to an array of information sources.
- Conduct market assessments of potential new technologies or product/service offerings.
- Identify external factors that shape customers’ attitudes and opinions.
- Work closely with primary research analyst teammates to deliver integrated research deliverables.
- Perform other tasks as needed to support Marketing Research objectives.

Education:
- B.A./B.S. in engineering, finance, or related field is strongly preferred.
- Master’s Degree is an asset, but is not required.

Experience:
- Knowledge of smart meters, smart grid, micro grid and innovative products and services is desired.
- Demonstrated knowledge of finance and/or financial analysis and research is desired.
- 7+ years of experience in secondary research, market intelligence, or competitive intelligence field is required.
- 7+ years of experience directly related to the energy sector or utility industry is required.
- Demonstrated knowledge of energy and utility industry issues, operations, finance, and technology is required.
**Occupation Profile**

**Mechanical Engineer:** Researches, designs, develops, constructs, and tests mechanical devices including machines, engines and tools. Works on devices ranging from power generators to household dishwashers to surgical equipment. May specialize in a particular type of machine or tool. May develop new devices or improve existing ones to run more efficiently.

**Common job titles include:**
- Mechanical Engineer
- Mechanical Design Engineer
- Design Engineer
- Senior Mechanical Engineer

Summary
Position performs a variety of engineering work in designing and planning the manufacturing, installation and operation of commercial refrigeration systems. Researches, develops, designs, and tests mechanical components, equipment, and systems by performing the following duties.

Job Description and Responsibilities:
- Works with Inside Sales, Engineering and Production to design and engineer refrigeration equipment
- Design plans and accurately document the manufacturing, installation and operation of mechanical components, equipment, systems including piping, and machinery
- Interprets blueprints and layouts to verify and plan appropriate mechanical needs
- Interacts with other technical, shop or field personnel to develop an understanding of mechanical requirements and planning needs
- Formulates and recommends engineering policies and technical work in accordance with project objectives.
- Applies engineering theory to solve mechanical problems
- Develops applications of controls, instruments, and systems for new commercial and industrial refrigeration uses
- Directs activities to ensure that manufacturing, construction, and installation conform to customer requirements
- Uses computer assisted engineering and design software and equipment to perform engineering tasks
- Other duties as assigned

Qualifications/Requirements:
- Proficient in Microsoft Office suite and 2D AutoCAD
- Solid Works knowledge is a plus
- Ability to successfully manage multiple tasks
- Strong attention to accuracy and detail
- Excellent interpersonal and communication skills with positive can-do attitude
- The ability to demonstrate dependability and flexibility to manage work as required

Education/Training/Experience:
- Bachelor’s Degree in Mechanical Engineering or Mechanical Engineering Technology.
- Lean/Six-Sigma Green belt is desirable
Network / Systems Administrator

**Occupation Profile**

**Network / Systems Administrator:** Manages the day-to-day operations of an organization’s computer networks, including the systems that connect computers and other technology to each other and to outside networks. Installs, organizes, and supports the hardware and software of these systems.

**Common job titles include:**
- Systems Administrator
- Network Administrator
- Senior Systems Administrator
- LINUX Systems Administrator
- Windows Systems Administrator

**Employability Skills:**
- Troubleshooting
- Communication Skills
- Problem Solving
- Planning
- Organizational Skills
- Writing
- Research
- Detail-Oriented
- Multi-Tasking
- Change Management

Job Description

- Must be a U.S. citizen with the ability to obtain a Secret clearance.
- Must be located in San Diego, CA.
- Participate in resolving technical issues that may arise during system integration.
- Work closely with the lab lead, developers and test teams to ensure they have the required infrastructure to deploy, test and properly configure the application.
- Apply OS patches and upgrades on a regular basis, and upgrade administrative tools and utilities. Configure / add new services as necessary.
- Upgrade and configure system software that supports testing infrastructure per project or operational needs.
- Manage user account and permission change requests.
- Perform ongoing performance tuning, hardware upgrades, and resource optimization as required.
- Configure CPU, memory, and disk partitions as required.

Desired Experience:

- Experience with VMware vSphere and software defined networks.
- Experience with SCRUM and Agile development processes.
- Experience configuring and managing Team Foundation Server and Microsoft Test Manager.
- Experience installing and configuring Microsoft Internet Information Services.
- Experience installing and configuring Microsoft SQL Server 2012.
- Experience with deploying and maintaining Host Based Security System (HBSS) servers for policy development and testing.
- Assist with the maintenance of the DoD IA accreditation documentation.
- Experience providing IA vulnerability assessments including STIG and SCAP scanning.

Required Experience:

- Must be a U.S. citizen with the ability to obtain a Secret clearance.
- Administering Windows Server 2008 R2 and/or Server 2012.: 4 years
**Occupation Profile**

**Network / Systems Support Specialist:** Evaluates, troubleshoots, and maintains an organization’s computer and network systems, usually as part of an information technology department.

The Network Engineer/Architect is responsible for the development of architectural strategy, including technology standardization and modernization of enterprise data center and disaster recovery network infrastructure services. This position will provide close coordination with and across multiple IS information security, operations, and business organizations to ensure network architecture, design, engineering, and security services are optimized for delivery of various service offerings.

**Job Requirements**

Highly preferred: Bachelors degree and 5+ years experience in investigating, deploying, and optimizing LAN/WAN technologies required.

The candidate must possess outstanding interpersonal skills, presentation skills, and writing skills. Strong working knowledge of network management/analysis tools and operating systems required.

Proficient in network architecture, design and engineering in areas of expertise including:

- Strong technical, analytical, and organizational skills associated with planning, design, and implementation of customer services in a Cloud computing environment.
- Strong technical and non-technical communication and interpersonal skills.
- A strong background in network administration and Internet technologies.
- Five to ten years experience with network design and strategic network planning. Ideal candidate is able to build and maintain designs to align to big picture direction of the overall enterprise strategy AND provide daily operational support as required.
- Expertise on the following platforms: Cisco ASA and Palo Alto firewalls, F5 Viprion (LTM,GTM,AFM) Cisco Nexus 7k/5k/2k and Cisco catalyst switches.
- Heavy F5 LTM/GTM/AFM hands-on and architecture experience is a must, experience with APM and ASM is a plus.
- Strong technical knowledge of various technologies such as DMVPN, LAN/WAN QoS, Nexus VPC/FabricPath, F5 iRules, and network virtualization.
- Technical knowledge of network security infrastructure process and procedures including firewall and network security design best practices.
- CCNP or CCDP certification preferred.
- Experience with packet/protocol fault analysis for common IP and Ethernet protocols using network traces or sniffer captures.
- Strong project management skills and experience managing projects at remote locations.
- Strong self-motivator who works equally well alone and within a team.
- Stays current on all technology trends and products both via formal training and independent learning.
- A proven track record of managing multiple projects through all life-cycle phases.
- Able to clearly communicate plans, alternatives, and recommendations in both written and verbal form.
- Produce detailed conceptual and logical architectures that meet business and technical requirements.

Purpose

Manage a production area by ensuring quality standards are adhered to including a safe work environment; by planning and prioritizing the daily work schedules to maintain production schedules, and by meeting plant and business objectives such as yield and efficiency.

Key Responsibilities:

- Work as part of a core team concept comprised of Production Supervisor, Quality Engineer and Manufacturing Engineer. While Quality Engineer and Manufacturing as not direct reports of the Production Supervisor, the production supervisor should be seen as guiding the triad direction.
- Meet quality objectives by ensuring compliance to quality systems and partner with Quality function as necessary.
- Develop and communicate departmental goals in order to achieve effective core 5 metric performance and administer the Employee Incentive Program.
- Investigate root cause(s) of non-conformances (i.e. NCMR, audit, etc.), identify and execute corrective actions by expected completion date(s).
- Work closely with cross-functional groups to develop continuous improvement plans (i.e. engineering, calibration, materials management, equipment engineering and quality) in order to achieve plant and departmental objectives.
- Ensure integrity of data systems (i.e. Kronos, SAP, LMS, TRS, PDM, etc.).
- Will supervise or coach direct labor operators and technicians. Trains and/or provides work direction to technicians and manufacturing personnel.

Quality System Requirements:

- Assures that appropriate resources (personnel, tools, etc.) are maintained in order to assure Quality System compliance and adherence to the BSC Quality Policy.
- Establishes and promotes a work environment that supports the Quality Policy and Quality System.

Management Requirements:

- May lead a group or team of employees in the achievement of organizational goals. Guide, coach, direct, and develop direct reports, and if applicable, drive those practices throughout their organization.
- Foster a diverse workplace that enables all participants to contribute to their full potential in pursuit of organizational objectives.
- May direct and control the activities and budget of one or more functional areas, divisions, product groups, projects/programs and/or operations.
- Monitor and ensure compliance with company policies and procedures.

Requirements:

- BS/BA Degree in related field
- Minimum of 3 year of technical professional experience and 0-3 years people management experience.
**Occupation Profile**

**Quality Inspector / Technician:** Inspects and evaluates products according to company quality control standards. Inspects goods or packaging in a production or manufacturing facility.

**Common job titles include:**
- Quality Inspector
- Quality Assurance Specialist
- Quality Technician
- Quality Control Inspector
- Quality Control Technician

### Top Certificates

- American Society of Mechanical Engineers (ASME) Certified  
- American Society For Quality (ASQ) Certification
SUMMARY:
The Quality Inspector will perform routine checks, tests, gauging, and instrument inspections of materials, goods in process, and finished goods. Initiate NMRs as required; create certificates of conformance for manufactured products and resale products.

ESSENTIAL DUTIES AND RESPONSIBILITIES:
- Performs AS9102 First Article Inspection conformities and fills out appropriate documentation
- Inspect visually for obvious defects
- Identify defects and segregate from acceptable product. Initiates NMRs as required
- Notify Production Supervisor and Quality Manager when inspection data exceeds acceptable limits or when major incidents of poor quality are noted
- Record results on inspection forms
- Adhere to all AAR Composites Safety Procedures and Safety Accountabilities (Ref. SP-011)
- Performs internal systems, process and product audits as scheduled
- Other duties as assigned

QUALIFICATIONS:
To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required. Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

EDUCATION and/or EXPERIENCE:
- Associate's degree in Engineering or related discipline or five years experience as an inspector
- American Society for Quality Certified Mechanical Inspector a plus
- Use inspection gauges and test equipment
- Knowledge of ISO 9001 and AS 9100 Quality Systems; AS9102 First Article Inspection Conformities
- Knowledge of Geometric Dimensioning & Tolerancing (GD&T) and blueprint reading
- Internal Auditing experience desired, but not required
- Proficiency Microsoft Office, including Word, Excel, Outlook, PowerPoint and Access
- CMM and FARO Arm experience is a plus
Scheduler / Operations Assistant

Occupation Profile

Scheduler / Operations Assistant: Provides scheduling and logistical support for an office, company or organization. May specialize in scheduling required for production or for administrative work.

Common job titles include:
- Scheduler
- Production Assistant
- Production Coordinator
- Appointment Setter
- Master Scheduler

Employability Skills:
- Communication Skills
- Organizational Skills
- Writing
- Planning
- Detail-Oriented
- Computer Skills
- Problem Solving
- Multi-Tasking
- Research
- Time Management

© 2016 Burning Glass Technologies
We are looking for an experienced tester to work as part of our expanding quality assurance group. In this role you will be responsible for defining test approaches and test plans for assigned functional test areas, expanding our current test cases and executing required tests. You will own complete functional areas and must be able to define test approaches and strategies, as well as execute functionality, compatibility, integration and reliability testing for both mobile and desktop applications.

**Key Qualifications**
- Knowledge of the iPhone OS
- Experience testing mobile applications.
- Testing applications with OS X and Windows based platforms.
- Must have a working knowledge of SQA methodologies and practices.
- Proven bug detection and regression skills.
- Working closely with a large team of testers & developers.
- Reporting and tracking bugs & third-party issues.
- Extensive use of QA tools and automation.
- Comfortable and adaptable in a fast-paced and informal environment.
- Bachelors degree or equivalent experience.

**Description**
This position requires a self-motivated and dynamic individual with strong technical and communication skills who can contribute in a team environment. In addition, this position requires someone who is very detailed oriented, can juggle manual as well as automation testing, and can work in a fast-paced testing environment.

**Education**
BS in Computer Science or equivalent work experience
Solar Installer: Installs solar energy systems for homes or larger buildings. Mounts frames and solar panels on the roof; may install and connect electrical wiring and power storage batteries.

Solar Installer: Sample Posting

Overview
Seeking applicants to install residential grid-tied PV systems. In this position, the PV Installer will provide support to the crew lead of the installation team, communicate job status data to the operations management, and ensure the completion of installation of all solar arrays/systems.

Responsibilities
• Pulling inventory for each installation job
• Pre-assemble job components in the warehouse
• Lay out and assembly of solar modules / array and mounting hardware
• Mechanical/structural mounting of racking, modules and electrical equipment
• Electrical wiring of solar array/system (AC and DC)
• Document completion of completed installation
• Clean up of job site
• Attend mandatory training sessions on new products, installation methodology and safety
• Additional duties required as needed

Qualifications
• 1 year of roof work, general construction, or carpentry required
• Previous solar experience strongly preferred
• Must be able to lift 50lbs
• Ability to work in extreme environments (example: hot sun, cold, crawl spaces, etc)
• Must be willing and able to climb ladders, stairs, work on rooftops and able to work on your feet for long periods of time
• Basic computer skills including familiarity with Microsoft Office programs
• High school diploma or GED required
• Excellent written and verbal communication skills required
• Excellent customer service skills required
• Thrive in a team environment
• Regular, reliable and predictable attendance required
• Must have a valid state driver’s license
• Must have a clean driving record (example- no DUI in the last 5 years)
• Must be able to successfully pass a pre-employment criminal, driving and drug screen

The ideal candidate will be a clinician (physician or nurse) who has worked in a healthcare setting in the past and brings with them a clinical skill set as well as coding terminology expertise. An experienced certified coder would also be considered. This role involves product development as part of the broader Clinical Informatics research and development team. The Clinical Analyst will also be involved with development of new clinical logic with in our software applications that will be used by healthcare provider organizations, health plans and employer/broker segment clients. Experience with evolving healthcare regulatory changes is desirable (CMS, Pioneer, Medicare Shared Savings Program, HEDIS, NCQA). This role involves software product development as part of a broader Clinical Informatics research and development team.

Requirements:

- Broad clinical background (ideally, an RN or MD, although an experienced certified coder with proven analytic experience would also be considered (RHIA, CCS, CCS-P, CPC).)
- Knowledge of medical and pharmaceutical coding sets (ICD-9/10, CPT, HCPCS, NDC and others)
- Knowledge of the processes (esp. periodic updates) related to medical code classification systems
- SQL experience required, SAS desirable
- Ability to use basic Access functions (import/export of data, creating/using tables and queries and macros) a plus
- Basic understanding of the distinctions between and features of the major U.S. health care coverage entities - Medicare, Medicaid, Commercial - and important sub-groups, such as Medicare Advantage, HMOs, PPOs
- Knowledge of new directions in U.S. healthcare - PPACA, insurance marketplaces, ACOs, "consumer driven" plans, PCMH, etc. is a plus
- Basic understanding of risk adjustment methodology a plus
- Knowledge of SNOMED is a plus but not essential
- Office Excel, Word, PowerPoint, Access, etc. required
Energy Analyst / Auditor

Occupation Profile

Energy Analyst / Auditor: Inspects homes or commercial facilities and advises customers on how to improve energy efficiency and save on energy costs. Researches energy use on a larger scale, monitors costs, demand and supplies and distribution of different energy sources such as gas or oil.

Common job titles include:
- Energy Analyst
- Energy Consultant

Description

The Energy Team focuses on investing capital across the capital structure in all sectors of the global energy and natural resources industries, with a focus on credit oriented opportunities in the North American energy markets. From 2005 to 2013 the Energy Team invested over $14 billion across a wide range of energy companies and sectors. Candidates will develop both quantitative and qualitative skills through the investment process and will have the opportunity to gain exposure to a wide range of investment types and energy industry sectors.

Responsibilities

Analysts will have the opportunity to participate in all aspects of the investment process from initiation to close. Responsibilities will include:

- financial analysis,
- assistance in the execution of transactions (including meeting and interacting with management teams as part of the due diligence process),
- industry research and competitive analysis,
- legal documentation and drafting of memoranda for internal and external use.

Candidates can expect to work on numerous projects at a time in various private and public investment opportunities. The small size of the professional staff and the extent of the deal flow require lean staffing and significant responsibility sharing.

Qualifications

Employer seeks to hire individuals with 2-4 years of relevant work experience who are highly motivated, intelligent and have demonstrated excellence in prior endeavors. In addition to strong analytical and quantitative skills, the successful candidate should have:

- strong communication skills,
- a demonstrated ability to write effectively,
- a desire to work in a team environment, and
- the ability to think and work independently.

Prior investment banking experience and knowledge of accounting, finance and the energy industry is highly desirable.
